DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of Species 3, Formula 4, claims 1, 4, 7-15, 18, 21-23 in the reply filed on 7-17-06 is acknowledged.
2. Claims 2-3, 5-6, 16-17, 19-20, 24-28 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 7-17-06.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1, 4, 7, 9-13, 15, 18, 21, 23 are rejected under 35 U.S.C. 102(b) as being anticipated by Inoue et al. (JP 8-195199, translation).

Inoue et al. teaches in claims 1-3, 6, that the positive electrode contains an electron-donative compound which can be at least one of bis-ethylene dithio tetrathiafulvalene, etc. Inoue et al. teaches in claim 4, that the positive electrode comprises Li_xCoO_2 , Li_xNiO_2 or $\text{Li}_x\text{CoYNi}_{1-y}\text{O}_2$. Inoue et al. teaches in claims 7-8, that the negative electrode comprises carbon fiber. Inoue et al. teaches on page 3 of

translation that the electrolytic solution comprises a nonaqueous solvent. Inoue et al. teaches on page 3, that the positive electrode comprises LiCoO_2 , acetylene black, pyrene and an electron-donative compound, bis-ethylene dithio tetrathiafulvalene. It was made into a paste and applied on an aluminum foil.

Allowable Subject Matter

5. Claims 8, 14 and 22 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Mikawa et al. (JP 60-14762, translation) teaches on pages 4-5, that an organic compound used in the present invention may be any compound whose cation or anion combines with an electrolytic ion in an electrolyte solution or the solid electrolyte to form a conductive and organic complex. The electron organic compounds can be compounds with a fulvalene skeleton such as tetrathiafulvalene, etc. Mikawa et al. teaches that the organic compound is present in the electrolyte.

Art Unit: 1745

Negoro et al. (JP 10-106624, translation) teaches that an organic compound such as B20 on page 11 can be present in the electrolyte.

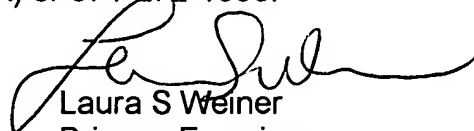

Takahashi et al. (JP 1-172382, translation). Takahashi et al. teaches a charge – transfer complex comprising a fulvalen derivative represented by Formula (I) and/or Formula (II). Takahashi et al. teaches on page 3, a battery that has a positive electrode which uses iodine as the positive electrode active material mixed with an electron-donor and lithium as the negative material. A well-known example of the electron donor is tetrathiafulfulvalene represented by Formula (III).
